

FRENCH CYLINDRICAL**Ferraz Shawmut**

821cp gRB

SEMICONDUCTOR PROTECTION FUSES

**800V AC****gRB from 8 to 110A****SIZES: 27 X 60****Features/Benefits**

- **Extremely high Interrupting rating Fuses:**
Protection of power Semiconductors complying with IEC standards 269-1 and 4
- **800V Voltage Rating** according to IEC 33
- **gR Class** as per IEC 269-4
 - Full range protection
 - Improved safety and protection
 - Allows selective coordination
- With built in Trip Indicator

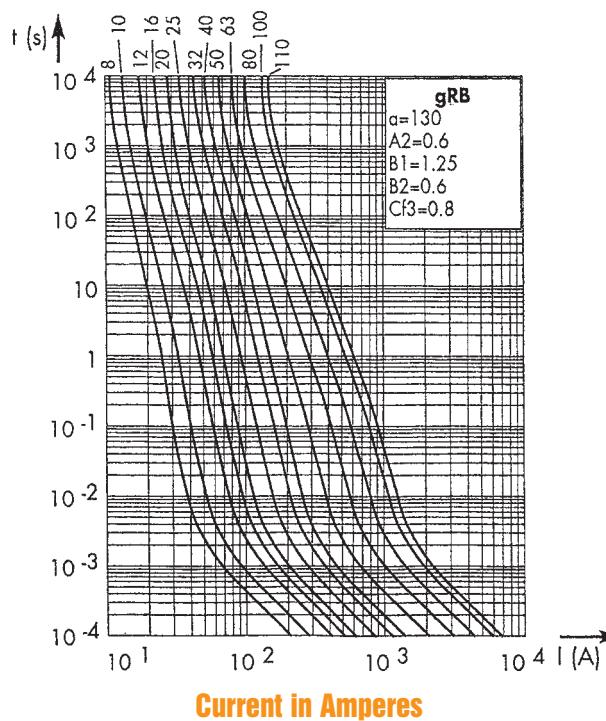

D**Dimensions****APPLICATIONS DATA**

Voltage rating U_N (V)	Class	Current rating I_h (A)	Melting I_t @ 1 ms I^2t_p (A ² s)	Total clearing I_t @ U_N I_t (A ² s)	Watt losses		Tested interrupting rating	CATALOG NO.				REF

Minimum operating voltage for trip-indicator: 20 V

821cp gRB**SEMICONDUCTOR PROTECTION FUSES****Melting Time Current Data**

Time in Seconds

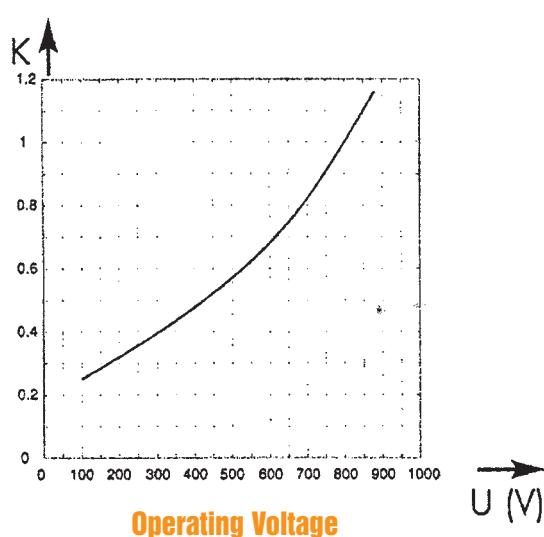

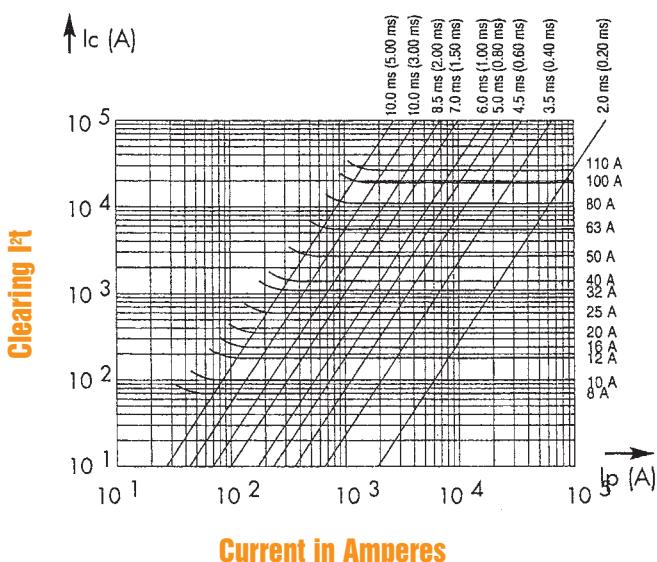

**Peak Let Thru Current Data**

Max Peak Let Thru Current Data

**Available Current in Sym. Amps**

Curves show, for each rating, value of peak let-through current I_c as a function of available fault current I_p .

Curves show, for each rated current, pre-arcing time vs. R.M.S. pre-arcing current.
Tolerance for mean pre-arcing current $\pm 8\%$.

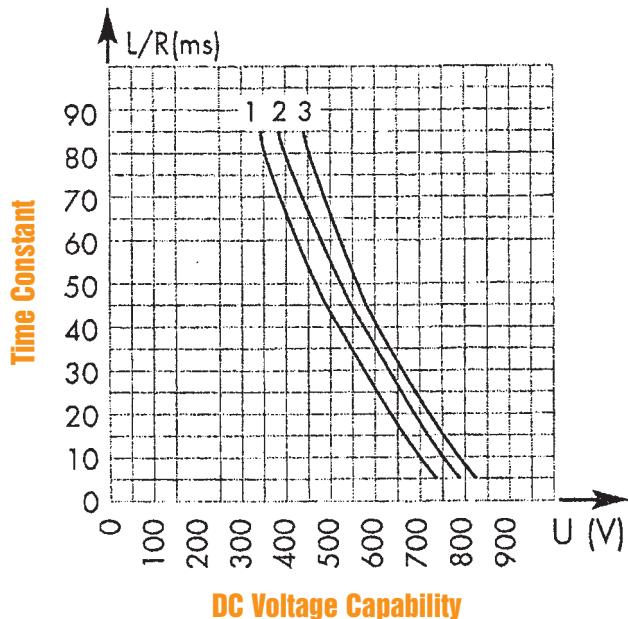

Clearing I^2t vs. Operating VoltageCorrection Factor I^2t **Total Clearing I^2t** 

Correction Factor to determine the clearing I^2t of a fuse operating below its rated voltage

821cp gRB

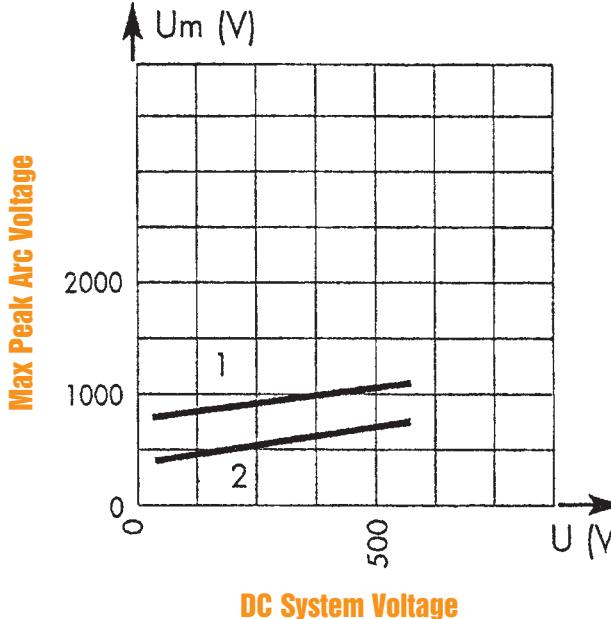

SEMICONDUCTOR PROTECTION FUSES

DC Voltage Capabilities vs. Time Constant

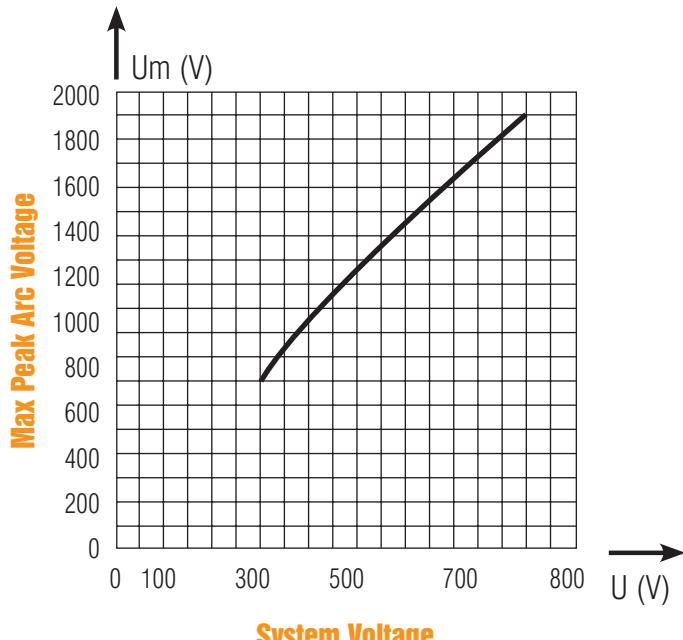

Provides the DC voltage capability of a fuse as a function of the circuit time constant.

DC Peak Arc Voltage

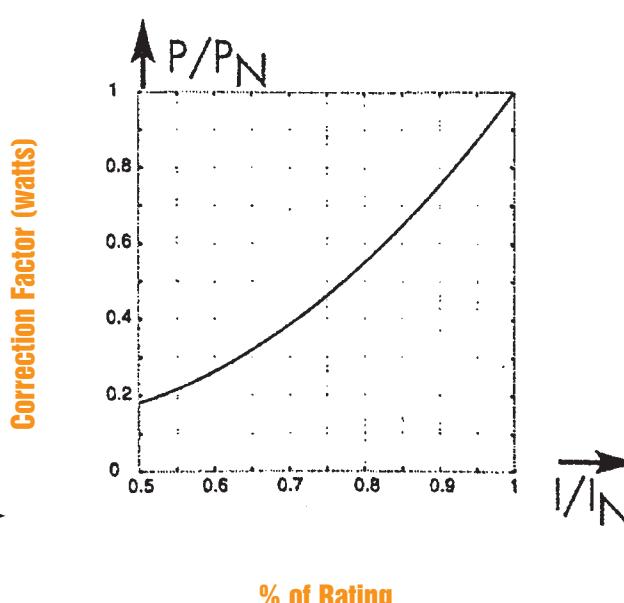

1 - $L/R = 60\text{ ms}$ / 2 - $L/R = 30\text{ ms}$
Above: Curves indicate peak arc voltage U which may appear across fuse terminals of working voltage U , for different values of time constant L/R of the fault circuit.

Peak Arc Voltage

Determines the peak arc voltage across the fuse terminals as a function of applied voltage.

Watts loss Correction

Correction factor to determine watts loss value of a fuse operating below its rated current.
